
Capital Market Research Company of the Year 2023

V.M.Z. Vermögensverwaltungsgesellschaft

For three decades, VMZ (Vermögensverwaltungsgesellschaft) has specialised in asset management, working to safeguard clients' existing assets and offering comprehensive support for customers during and after investment. Its motivated and highly qualified team work in collaboration with clientele to provide investment opportunities that create wealth and preserve value.

Founded by Dr. Markus C. Zschaber m.b.H, VMZ offers an independent, highly professional asset management service. Its founder and managing director is considered one of the most renowned asset managers in Germany and uses his experience to support all processes in the company. During the country's financial crisis and the ongoing euro crisis, Dr. Markus C. Zschaber has been available to political bodies as an external advisor and is currently involved in discussions with Berlin and Brussels concerning sovereign debt, inflation, and ECB policy. VMZ's customers include private investors, municipalities, charitable funds, pension funds, and foundations. Its clientele attest to the company's superior, reliable services in the fields of asset and portfolio management.

Portfolio management involves managing investments and other financial products (stocks, bonds, mutual funds) that make up your portfolio. Asset management is a broader term referring to the process of managing and maintaining a company's or individual's assets (property, equipment, investments).

VMZ's proven investment process forms the foundation for all of the business investment decisions. Its process is based on years of research and a company assessment to determine dynamic and organic growth, high recurring revenue, profitability, management, and healthy operating margin. Through the company's informed asset allocation and intelligent portfolio management, clients can use the fluctuating stock markets to work to their advantage.

VMZ believe a risk management approach is one of the key factors for the sustainable success of a portfolio. Sustainable risk management is a strategy that uses a company's environmental, social, and governance policies to address potential risks and generate sustainable long-term growth. Examples of risks fall into three categories: environmental (inefficient energy consumption, failure to adapt to climate change), social (discriminatory hiring, unsafe work environments), and governance (inadequate risk management, lack of financial transparency). VMZ's effective risk management framework helps the company to identify any emerging challenges that could affect the organisation's operations. Maintaining this approach allows VMZ to successfully manage and make decisions concerning its clients' portfolios.

Describing the company's working attitude, Dr. Markus C. Zschaber says, "We are a very motivated and highly qualified team that enjoys working, managing, and analysing. This requires greater effort and a high demand on management and the operational team. Short-term success can be luck, but you can't base your strategy on luck, especially not when it comes to investing."

Having worked within capital markets for almost thirty years, the company has seen out many challenges and market fluctuations. VMZ attributes its excellent performance to an extensive sustainable risk management strategy and continuous research. Based on its industry experience and management qualities, VMZ is able to offer the right form of investment for every client's needs. Employees take the time to consider a customer's individual circumstances and work to prioritise their wishes with an investment strategy. The company seeks to always remain transparent and comprehensive, maintaining regular communication with investors.

Both the company founder and VMZ have received numerous awards for outstanding work with investors. VMZ prides itself on its customer orientation and continues to provide successful financial outcomes for its customers. The company predicts challenges in relation to the stock market, economy, and German politics. Despite this, VMZ remains optimistic that with thorough risk assessments, discipline, and foresight, the business will continue to create wealth and preserve value for years to come.
